GEM
SERIES

DESCRIPTION:

GEM Series combo pressure build – economizer regulators offer optimum performance for cryogenic liquid cylinders. The regulators are designed for fast pressure building, steady head pressure during all use conditions, and maximum efficiency economization when cylinder pressure is near relief valve setting. The pressure-build and economizer functions are completely separated which eliminates function overlap and improves overall cylinder efficiency. GEM Series regulators provide high flow and quick, positive shut off at the desired set pressure. Solid, non-tied diaphragm allows for leak-free and long-lasting performance. All GEM Series regulators are supplied factory pre-set and cleaned for oxygen service.

FEATURES:

- **OPTIMIZED FOR CRYOGENIC LIQUID CYLINDERS:** Designed to exceed the PB and Economizer performance of current market offerings for cryogenic liquid cylinders.
- **SEPARATE PB AND ECON FUNCTIONS:** Design maintains separation between pressure build and economizer functions to eliminate overlap.
- **MAXIMIZED ECONOMIZER FLOW:** Regulators are designed for maximum economizer flow performance, minimizing product loss.
- **SOLID, NON-TIED, DIAPHRAGM:** Solid diaphragm eliminates potential leak path and increases sensitivity.
- **CLEANED FOR OXYGEN SERVICE:** Regulators are cleaned for use in Oxygen service standard.

PERFORMANCE AND SETTING INFORMATION

BENCH SETTING AND TESTING

Regulators are 100% Factory Preset to desired Set Pressure (See How to Order below).

IMPORTANT: When setting off the cylinder (bench setting), it is important that the outlet and economizer ports are connected to avoid damage to the regulator.

Consult factory for specific instructions for proper bench setting and testing (Document EN-FR-160).

QUALIFIED PERFORMANCE

High Flow Design results in Reduced Pressure Build Time and Higher Steady State Pressure during high use periods.

Extensively field qualified. OEM Approved & Endorsed.
